

DURAROLL

Duravey Bulk Handling offers an extensive range of conveyor system components such as idlers, frames, stringers and pulleys to accompany the conveyor system. Conveyor idlers can be fabricated from various materials such as Steel, Nylon, UPVC and Rubber. The idler range fully comply with SANS 1313 and is manufactured in an ISO9001 accredited facility.

Our range of idlers are fitted as a standard with anti seize bearings with a state of the art sealing arrangement for optimal bearing performance. Duraroll idlers are treated for corrosion protection with the fabrication process to extend the service life of the idler. We also specialize in the supply of rubber coated return idlers to prevent material caking and build up. This in turn will prevent belt misalignment and edge damage of the conveyor belt.

Our latest range of idlers can be manufactured with an Anti-Seize End Cap to prevent bearing and end cap damage. End cap damage has proven to be the most frequent cause of premature idler failure. With our Anti-Seize series, this issue will be eliminated especially for tough spillage control applications.

We also accommodate applications such as inclined conveyors where we offer Anti-RunBack idlers to prevent belt tension loss on breakage. Eliminate severe top cover and carcass damage by installing the Duraroll Impact idlers at your loading station for optimal impact absorption.

We cater for all segments of the conveying industry being it industrial, mining, agricultural and packaging we have the solution at your disposal.

Please feel free to contact our team, as they are ready to be of assistance.
